

TRAPP - Training for APPrentices – ERASMUS+

close to apprentices in the VET system !

TRAPP project aims to facilitate, secure and promote long-term mobility for apprentices in Europe by exchanging good practices and creating new tools to improve them.

As a result of the current health situation, the French Erasmus + agency has agreed to **extend the project implementation to February 2022.**

The pilot phase of the project's cross-mobilities has been postponed to autumn 2021 and will now take place between September and November 2021.

Despite the current health situation, TRAPP's partners continue to work on the development of innovative solutions, good practices, and tools to successfully organize long-term mobilities of European apprentices.

What are the last updates on TRAPP's 4 main activities and what are the tools we are currently developing?

Activity 1

Clarification of the legal framework to organize a long-term mobility

- ➔ **A useful report** to inform European mobility providers and VET centers **about the administrative and legal aspects of long-term mobility**, enriched by practical examples and recommendation issued by TRAPP experience.

Activity 2

Ensuring an equivalent presence in human resources

- ➔ **A guideline to understand what cross-mobilities** are and how to organize them.
- ➔ **A ready to use toolkit** to help for the recruitment of apprentices and companies, to maintain a company's workforce while sending an apprentice abroad and to ensure a successful match between work instructors and apprentices on mobility!

Activity 3

Guaranteeing the continuity of the apprentice's educational path during the mobility

- ➔ **A steps-by-steps pedagogical guide** to ensure a coherent education program thanks to the implementation of a Learning Agreement in line with the apprentice's curriculum.
- ➔ **Useful templates** to easily implement and replicate the different steps for new mobilities.
- ➔ **A collection of digital tools** to allow remote learning of theoretical subjects while being abroad.

Activity 4

Valorization of the professional skills acquired during a mobility

- ➔ **A guideline**, based on the ECVET approach, to provide a common methodology and make sure that the skills acquired during the mobility by an undergraduate apprentice contribute to the achievement of his/her final qualification.

The partnership meets virtually on a regular basis to continue to move forward with the project's activities and results.

The next meeting of the partnership in person is planned for June 2021 in Espoo, Finland !
